

How to use a plug-in optical splitter

Article Overview

To insert a plug-in optical splitter, remove protective caps, clean connectors, and carefully slide the splitter into the designated slot or adapter frame, ensuring proper fiber routing and minimal bending.

Step-by-Step Installation

1. Prepare the Installation Area

- Identify the slot or compartment in the fiber distribution box or cabinet where the plug-in splitter will be installed .
- Ensure the area is clean and free of dust. Remove any protective tape or dust caps from the splitter and adapter assembly .
- 2. Clean Connectors and Adapters
 - Detach the adapter assembly by turning the thumb screw counterclockwise if applicable .
 - Clean the fiber optic connectors and the rear side (feeder connectors) using a lint-free cloth or fiber cleaning tool to prevent contamination .
- 3. Insert the Splitter
 - Align the plug-in splitter with the adapter or slot. Most plug-in PLC splitters have a standard shell and may come in 1-slot or 2-slot types .
 - Gently slide the splitter into the slot until it clicks or is securely seated. Avoid bending the fiber cables to a radius smaller than 0.6 inches (1.54 cm) to prevent damage .
- 4. Connect Input and Output Fibers
 - Connect the input fiber to the splitter's input port and the output fibers to the corresponding output ports. Use LC or SC connectors as required by your splitter type .
 - Ensure fibers are routed neatly and secured to prevent stress or accidental discon...
