

How to use the best-selling fiber optic end-face inspection instrument

Overview

Simply affix the FIP-500 to the connector endface and—in less than 10 seconds—a pass/fail result is automatically obtained and saved without the need for any settings or further manipulation. This fiber optic inspection scope provides automated PASS/FAIL certification take the guess work out of. Microscopes for network maintenance, lab and manufacturing to inspect the end face of single and multi-fiber connectors for scratches, defects and contamination. Even a small dust particle or scratch on the endface can increase insertion loss, reduce return loss, and introduce random link instability. We also offer two scanning white-light interferometers (SWLI) that enable. Inspection and cleaning of fiber optic end faces have been best practices for some time, yet contaminated connections remain the number one cause of fiber-related problems and test failures for data centers, campuses, and other enterprise or telecom networking environments.
