

Huawei s FTTR equipment uses a beam splitter

Overview

The FTTR (Fiber to the Room) GPON PLC Splitter is an integral component of Huawei's FTTR solutions. This splitter exemplifies the convenience of a plug-and-play device that requires no field splicing, offering immediate functionality upon installation. 1 x Main FTTR can supports maximum 16 Sub FTTR. Plug-and-Play Simplicity: Ready to use out of. stable gigabit Wi-Fi experience in every corner of your room. FTTR con is the satellite, connecting through fiber or b ibution uni 0-T-1-SA) is used to store the remaining length of the. A fiber-optic splitter, also known as a beam splitter, is based on a quartz substrate of an integrated waveguide optical power distribution device, similar to a coaxial cable transmission system. The optical network system uses an optical signal coupled to the branch distribution. Demands for high bandwidth, high bit rates in both directions, low latency, and service reliability are constantly growing.
