

Huijue Huawei Optical Module Interconnection

Article Overview

Huawei optical modules support a wide range of pluggable interfaces and transmission rates, and interconnection with third-party modules like Huijue depends on matching interface types, transmission standards, and fiber specifications.

Huawei Optical Modules Overview

Huawei offers a comprehensive portfolio of optical modules for data center and enterprise networks, including SFP, eSFP, SFP+, SFP28, XFP, QSFP+, QSFP28, and CFP types, supporting transmission rates from GE to 800GE . These modules are designed for plug-and-play deployment, with strict performance specifications to ensure long-term stability, high reliability, and secure operation in data center networks . Huawei modules also feature channel loss resistance and contamination detection to improve reliability by up to 10x .

Interconnection Principles

To interconnect Huawei modules with third-party modules such as Huijue, the following factors must be considered:

- **Interface Compatibility:** Both modules must use the same physical interface type (e.g., SFP+, QSFP28) and connector type (LC or MPO) to ensure proper electrical/optical signal conversion .
- **Transmission Rate Matching:** The module's data rate must match the port's suppo...
