

Huijue Optical Module Manufacturer ID Encryption

Article Overview

You can encrypt or modify the manufacturer ID of Huijue optical modules by accessing the module's EEPROM via I²C and using specialized coding tools like SFPTotal boards.

Understanding the EEPROM in Optical Modules

Optical transceivers such as SFP, SFP+, and QSFP modules store critical information—including manufacturer ID, part number, serial number, and diagnostics—on a small EEPROM chip. This memory is non-volatile and accessible through a standard I²C interface, allowing read, write, and byte-level operations. The manufacturer ID is part of the vendor information stored in the EEPROM, which networking equipment reads to verify compatibility and enable features like Digital Diagnostics Monitoring (DDM).

Tools for Programming and Encryption

To modify or encrypt the manufacturer ID, you need a transceiver coding board and compatible software. Devices like SFPTotal Mini, Plus, or Plus X provide USB-based access to the EEPROM of various transceiver types (SFP, SFP+, QSFP, QSFP28, etc.). These boards allow you to:

- Read the EEPROM content
- Decode and edit fields such as manufacturer ID...
