

IP5 Distribution Box

Article Overview

An IP5 distribution box is a protective enclosure designed to safeguard electrical components from dust and water ingress, typically rated at IP55 or higher for outdoor and industrial use.

Overview

An IP5 distribution box, such as the RGL IPBOX-5, is a robust metal enclosure that provides protection against dust and moisture, making it suitable for outdoor installations and harsh environments. These boxes are designed to house sensitive electronic or electrical components safely, ensuring reliable operation even under challenging conditions.

IP Rating and Protection

The "IP" in IP5 refers to the Ingress Protection rating, which classifies the degree of protection against solids and liquids. For example, an IP55 or IP65-rated box offers:

- Dust protection: Limited ingress of dust is allowed but does not interfere with operation.
- Water protection: Protection against water jets or splashes, suitable for outdoor exposure. Higher IP ratings, such as IP66 or IP67, provide even greater protection against water, including temporary immersion.
