

If there s no fiber optic cable how do I connect it

Article Overview

If fiber optic internet isn't available, you can still connect using alternatives like DSL, cable, fixed wireless, 5G home internet, mobile hotspots, or satellite.

Wired Alternatives

DSL (Digital Subscriber Line) uses existing phone lines to deliver internet. It's widely available and doesn't require new fiber installation, though speeds are generally lower than fiber and can degrade over long distances. Cable internet uses coaxial lines, offering faster speeds than DSL and reliable performance in urban and suburban areas. Both options allow you to connect a modem or router directly to your home network for stable internet access .

Wireless Alternatives

Fixed wireless internet transmits signals from a nearby communication tower to a receiver at your home. It can provide high-speed connectivity without laying cables, making it suitable for rural or underserved areas . 5G home internet leverages cellular networks to deliver fast internet wirelessly, often comparable to fiber speeds in urban areas. Mobile hotspots allow you to use your smartphone or a dedicated device to share cellular data with multiple devices, offering flexibility for travel or temporary setups .

Satellite Internet...
