

Imported Class I Distribution Box

Article Overview

An imported Class I distribution box is a robust electrical enclosure designed for hazardous locations, providing safe power and signal distribution in environments with flammable gases or vapors.

Overview

Class I distribution boxes are engineered for hazardous areas where flammable gases, vapors, or liquids may be present. They are typically rated for Class I, Division 2 or equivalent zones, ensuring safe operation under potentially explosive conditions . These boxes are used in industries such as oil and gas, chemical processing, offshore platforms, and pharmaceutical production.

Materials and Construction

Imported Class I distribution boxes are commonly made from stainless steel (1.4301 or 1.4404), aluminum, or glass fiber reinforced polyester (GRP) . These materials provide:

- High mechanical strength and durability
- Resistance to corrosion, extreme temperatures, and harsh environmental conditions
- Compliance with IP66 or NEMA Type 4X protection standards for dust and water ingress Some models include door or cover options, flange plates, and mounting plates, allowing for flexible installation and customization
