

Imported network security equipment SFP

Article Overview

SFP (Small Form-factor Pluggable) modules are compact, hot-pluggable transceivers used in network security equipment to connect switches, routers, and firewalls to fiber optic or copper networks, with global imports primarily from China, Malaysia, and Taiwan.

What is an SFP?

An SFP (Small Form-factor Pluggable) is a modular network interface used to convert electrical signals to optical signals and vice versa, enabling flexible connectivity for network devices such as switches, routers, and firewalls . SFPs are hot-pluggable, meaning they can be inserted or removed without powering down the device. They support various communication standards including Gigabit Ethernet, Fibre Channel, and PON, with speeds ranging from 1 Gbit/s (SFP) to 25 Gbit/s (SFP28) and beyond . SFP modules come in different types:

- Single-mode vs. Multimode fiber: Single-mode supports longer distances, while multimode is used for shorter connections.
- Copper SFPs: For direct electrical connections over Ethernet cables.
- SFP+, SFP28, and SFP112: Higher-speed variants for modern data centers and low-power applications .
