

Indoor electrical distribution box with hidden door

Article Overview

You can conceal an indoor electrical distribution box behind a hidden door using cabinets, hinged panels, mirrors, or decorative features while ensuring code-compliant access.

Design Approaches

1. **Cabinet Concealment** Build a small cabinet or cupboard around the DB box, making it look like a standard storage unit. You can paint or finish the cabinet to match the surrounding wall or furniture, creating a seamless look. Some designs integrate the DB box into a floor-to-ceiling closet or a small storage nook, allowing it to blend naturally with the room . 2. **Hinged Artwork or Mirrors** Mount a lightweight frame with artwork or a mirror on simple butt hinges. This allows the panel to swing open like a door, providing instant, tool-free access. Magnetic catches or small latches keep the cover flush against the wall while meeting safety requirements for emergency access . 3. **Sliding or Decorative Panels** Use sliding panels, folding screens, or patterned glass to hide the DB box. These can be designed to match the room's décor and can be moved aside quickly when access is needed. This approach works well in open areas or hallways . 4. **Multi-Functional Concealment** In some homes, designers integrate the DB box into functional furniture, such as a shoe cabinet, bench, or storage unit. This not only hides the panel but also adds utility to the space .

Safety and Code Considerations...
