

Installation of 12-core fiber optic cable for smart buildings in Australia

Article Overview

Installing a 12-core OM3 fiber optic cable in Australian smart buildings requires compliance with AS/CA S008:2020 standards, careful selection of cable construction, proper routing, and adherence to installation tension and bend radius limits.

Compliance with Australian Standards

All fiber optic installations in Australia must comply with AS/CA S008:2020 for customer cabling products and AS/CA S009:2020 for installation requirements, ensuring safety, performance, and regulatory adherence . Additional standards include AS 1049.1:2014 for cable insulation and sheathing, and AS 11801.1:2019 for generic IT cabling in commercial premises . Using Low Smoke Zero Halogen (LSZH) jackets is typically required for indoor commercial environments to meet fire safety regulations .

Cable Selection and Construction

A 12-core OM3 fiber cable is ideal for smart buildings due to its ability to support six independent 10GbE links or parallel optics for 40G/100G upgrades using MPO/MTP connectors . Cable construction depends on the environment:

- Loose tube construction: Suitable for inter-building links, warehouses, and indoor-outdoor transitions. Fibers are housed in gel-filled or dry-blocked tubes to protect against mechanical stress and thermal expansion....
