

Installation of Apartment-Specific Electrical Distribution Box

Article Overview

An apartment distribution box must be installed in a dry, accessible, ventilated location at a recommended height of 1–1.8 meters, with proper wiring, protective devices, and compliance with relevant electrical standards.

Location and Accessibility

The distribution box should be installed in a dry, well-ventilated area, away from water, flammable, explosive, or corrosive substances, and easily accessible for maintenance and inspections. For residential apartments, the recommended height is between 1 meter and 1.8 meters, with 1.3 meters suggested for elderly or handicapped residents. Ensure sufficient clearance around the box for safe operation and heat dissipation.

Enclosure and Protection

Choose an enclosure with appropriate IP or NEMA ratings to protect against dust, water, and mechanical damage. For indoor residential use, NEMA 1 or IP20 may suffice, while outdoor or high-humidity areas require higher protection, such as IP54 or IP66/NEMA 4. The enclosure material can be steel for durability or plastic for lighter indoor setups.
