

Installation of optical cable equipment

Article Overview

Installing fiber optic cables requires specialized tools for cable handling, splicing, testing, and network connectivity to ensure reliable performance.

Planning and Site Survey Equipment

Before installation, careful planning is essential to map routes and avoid hazards:

- Measuring tapes and laser distance meters for accurate cable length measurement and route planning .
- Mapping software/tools to document existing infrastructure and plan new cable paths .
- Cable locators to detect existing underground utilities and prevent accidental damage .

Cable Preparation Tools

Preparing fiber optic cables requires precision to avoid damage:

- Fiber strippers to remove the buffer coating and outer jacket without harming the glass fiber .
- Kevlar shears or scissors for cutting strength members like Kevlar yarn .
- Fiber cleaning supplies including lint-free wipes, isopropyl alcohol, and specialized cleaning solutions to remove dust and contaminants .
