

# International Energy Internet Company

## Article Overview

International Energy Internet (EI) enterprises are companies and organizations that integrate renewable energy, smart grids, and digital technologies to create a sustainable, low-carbon energy system.

### Overview of Energy Internet Enterprises

Energy Internet (EI) is a concept proposed by Jeremy Rifkin in 2011 as part of the Third Industrial Revolution, emphasizing the integration of distributed renewable energy generation, digital communication, and smart grid technologies to optimize energy production, distribution, and consumption globally . EI enterprises focus on building interconnected energy networks that allow for efficient energy sharing, real-time monitoring, and reduced carbon emissions.

### Green Technology Innovation in EI Enterprises

Sustainable development is central to EI enterprises. Research shows that green technology innovation (GTI) in these companies is influenced by multiple factors:

- Proximity-level factors: R&D investment and external cooperation directly enhance innovation .
- Transition-level factors: Market competition and business models act as key nodes for innovation.
- Essential-level factors: Environmental regulations and development strategies are root causes driving long-term sustainability . These enterprises aim to support carbon peaking and carbon neutrality goals, aligning with global climate targets such as th...
