

Is the network cable connected to the router fiber optic

Article Overview

The cable connecting to a standard home router is usually not fiber optic; fiber optic cables typically connect first to an Optical Network Terminal (ONT), which then outputs to the router via Ethernet.

Understanding Fiber Connections

Fiber optic internet transmits data as light through thin glass or plastic fibers, offering high speeds, low latency, and stable connections . However, routers generally cannot accept a raw fiber optic cable directly because they operate with electrical signals, not optical signals .

Role of the Optical Network Terminal (ONT)

The ONT is a device provided by your ISP that converts the incoming optical signal from the fiber into an electrical signal compatible with your router . The fiber optic cable from your ISP connects to the ONT's optical port, and then a standard Ethernet cable runs from the ONT to your router's WAN or Internet port . This setup ensures your router can distribute the internet connection to your devices.

Identifying Fiber vs Ethernet

- Fiber optic cable: Thin, often yellow, with SC/APC or SC/UPC connectors; carries light signals....
