

Is the switch s SFP used for access

Overview

SFP downlink ports are fiber-based ports designed for connecting access switches to end devices or other edge switches within the same layer. An SFP port on a Gigabit switch is a modular interface that accepts Small Form-Factor Pluggable (SFP) transceiver modules. Unlike fixed RJ45 copper ports, SFP ports support both fiber and copper modules, enabling far longer distances, greater flexibility, and improved scalability in enterprise. An SFP port (Small Form-factor Pluggable port) is a compact, hot-swappable interface used in network switches, routers, firewalls, and servers. These interchangeable modules support various media types, including copper or fiber-optic cables, providing flexible networking options based on specific requirements.
