

Jumper wire for small distribution box

Article Overview

Use a terminal block jumper or short insulated wire to connect multiple terminals efficiently in a small distribution box.

What a Jumper Wire Is

A jumper wire is a short length of conductive material, typically copper, used to electrically connect two or more points within a circuit. In distribution boxes, jumpers are commonly used to link multiple terminal blocks or circuit breakers, allowing power to be distributed efficiently without running separate wires to each terminal .

Types of Jumpers

- **Terminal Block Jumpers:** Pre-formed bars or strips designed to fit specific terminal blocks. They come in various styles such as spade, ring, tubular, sleeve, or pin terminals, and are often manufacturer-specific .
- **Insulated Jumper Wires:** Flexible wires with pre-stripped ends that can be bent or cut to size. These are useful when a pre-made jumper bar is not available or when custom spacing is required .
- **Multi-Conductor Jumper Cables:** Bundled wires with connectors at each end, suitable for connecting multiple points simultaneously in compact panels .

Choosing the Right Jumper

- **Compatibility:** Ensure the jumper matches the terminal block type and spacing. Many manufacturers produce jumpers that only fit their own terminal blocks .
- **Current Rating:** Select a jumper wire or bar that can safely carry the expected cur...
