

Large construction site electrical distribution boxes

Article Overview

Construction site electrical distribution boxes provide safe, high-capacity power distribution for tools, machinery, and temporary installations, with options ranging from 16 A to 400 A and robust, weather-resistant enclosures.

Overview

Large electrical distribution boxes, also known as construction site power distributors or distribution cabinets, are designed to safely manage electricity on construction sites, workshops, and temporary installations. They allow multiple tools, machines, and lighting systems to operate simultaneously while protecting users from electrical hazards through circuit breakers, RCDs, and fault isolation .

Key Features

- **Current Capacity:** Available in a wide range, from 16 A to 63 A for standard boxes, and up to 400 A for high-demand applications .
- **Voltage Options:** Typically include 230 V and 400 V outlets, suitable for both single-phase and three-phase equipment .
- **Safety Standards:** Compliant with IEC 61439, IEC 60364, and other regional safety standards, ensuring protection against electrical faults and environmental hazards .
- **Enclosure Protection:** Many units feature IP65 or higher ratings, fire-resistant materials, and impact-resistant casings (IK08-IK10), making them suitable for outdoor and harsh environments
