

Lithuanian Tray Cable Tray Model Parameters

Article Overview

Cable tray models in Lithuania typically follow IEC 61537 standards and BIM/IFC parameters, covering geometry, material, load, and installation specifications.

Cable Tray Types and Geometry

Cable trays can be classified into ladder, perforated, wire mesh, and solid types. Each type has specific geometric parameters for modeling:

- Straight sections: Length, width, height, and thickness are defined in the model.
- Rung spacing: For ladder trays, a typical spacing is 150-230 mm to support cables and maintain bend radius .
- Bends, tees, and risers: Include integral jointing plates or couplers for secure fit and alignment .
- Perforation patterns: Designed to allow airflow and heat dissipation around cables .

In BIM/IFC models, these parameters are represented using `IfcCableCarrierSegment` and associated property sets (e.g., `ePset` or `BIMids` custom properties) to ensure accurate digital representation . The model may include geometric duplication flags to maintain consistency across linked elements like floor slabs.

Material and Mechanical Properties

Cable trays are manufactured from steel, stainless steel (AISI 316L), aluminum, or p...
