

Maldives OEM Fiber Optic Distribution Frame 6 Cores

Article Overview

A 6-core Fiber Optic Distribution Frame (FDF/ODF) is a compact, wall-mounted unit designed for fiber termination, splicing, and distribution in FTTx networks, supporting up to 6 fiber cores with SC or LC adapters.

Overview

A 6-core fiber optic distribution frame serves as a termination and management point for optical fibers, connecting feeder cables to drop cables in FTTx communication networks. It allows for fiber splicing, splitting, and distribution while providing protection and organization for optical fibers. These frames are essential for both indoor and outdoor installations, depending on the model and environmental protection rating.

Key Features

- Capacity: Supports up to 6 fiber cores, typically with SC or duplex LC adapters.
- Splitter Compatibility: Can accommodate 1x4 PLC splitters (blockless type), though splitters and adapters are usually sold separately.
- Construction: Wall-mounted box design, compact and robust, suitable for small-scale deployments or locations with limited fiber counts.
- Dimensions: Common sizes include 186 x 116 x 41 mm or 223 x 180 x 48 mm, depending on the manufacturer.
- Protection: Outdoor models often feature IP55 or similar ratings for dust and water.
