Manufacturer s carrier-grade router OSFP

Article Overview

OSFP (Octal Small Form-factor Pluggable) modules and connectors provide high-speed, scalable interconnect solutions for carrier-grade routers and data center switches, supporting up to 1.6Tbps per port.

Overview of OSFP Technology

OSFP is a high-density, high-speed pluggable interface designed for next-generation routers, switches, and data center interconnects. It supports multiple lane speeds including 56G, 112G, and 224G PAM4 signaling, enabling aggregate data rates from 200Gbps up to 1.6Tbps per port, with scalability for future 3.2Tbps configurations using stacked connectors (Amphenol, TE Connectivity, Molex) . OSFP modules are compatible with passive and active copper cables, optical modules, and pluggable transceivers, providing flexibility for carrier-grade deployments .

Key Features for Carrier-Grade Routers

• High-Speed Connectivity: Supports 100GE, 200GE, 400GE, and 800GE interfaces, with Cisco OSFP modules offering multiple connectivity options for AI, enterprise, and service provider networks .
• Thermal Management: Integrated heat sinks and advanced thermal designs allow OSFP modules to operate reliably in high-power, high-density environments .
• Interoperability: OSFP modules comply with OSFP MSA, IEEE standards, and industry agreements such as OpenZR+ and OpenROADM, ensuring compatibility across multiple vendors and line rates .
• High Port Density: The 8-lane 224G PAM4 interface supports up to 1.6Tbps per po...
