

Metal optical cable models are available

Article Overview

Metal optical cables are available in metal-coated fibers, metallic aerial self-supporting (MASS) cables, and active optical cable assemblies for diverse industrial and telecom applications.

Metal-Coated Fiber Cables

Metal-coated fiber cables feature a high-throughput metal layer directly adhered to the silica cladding, providing resistance to temperature extremes, chemical corrosion, and mechanical stress. These cables are ideal for nuclear radiation environments, high-power laser delivery, medical applications, and chemical reactions in high-temperature or corrosive conditions. The metal coating enhances durability while maintaining optical performance, making them suitable for soldered fiber bundles and specialized spectroscopy applications (Microptik) .

Metallic Aerial Self-Supporting (MASS) Cables

MASS cables are compact, lightweight, and self-supporting, designed for installation on medium and high-voltage power lines without interfering with existing infrastructure. They integrate fiber optics within an all-metal construction, providing a telecommunications path while meeting sag and tension requirements. These cables are particularly useful for long-span aerial installations in utility and telecom networks, offering ruggedness and high-strength performance (AFL) .
