

Method for connecting the bottom of the cable tray

Overview

Splice plates are the most widely used method for connecting cable tray sections in straight runs. We fix them with nuts and bolts through the holes in the plate and the tray sides. Choosing the right one depends on project conditions, load, maintain spacing or to keep cables in place when the tray is bent the minimum bend radius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray is used for instrumentation and control applications that require, such as grounding conductor equipment. In accordance with National Electrical Code (NEC) Article 392 "Cable trays" first determine the Maximum Fuse Ampere Rating or Circuit Breaker Ampere Trip Setting or Circuit Breaker Protective Relay Ampere Trip Setting for Ground-Fault Protection is the minimum. But before you lay the first tray or clamp down a single cable, you need a solid plan.
