

Method for wrapping the plug of the optical cable splice box

Overview

After placing the reserved optical cable, wrap the splice closure with plastic cloth and place it in middle of the reserved optical cable circle. When burying the joint pit, be careful not to throw large stones into the pit to avoid damaging the optical cable and the box. In addition to the outer skin of the optical cable (if any, please remove the shielding and armoring) and then remove each wrapping layer until the loose tube is exposed. The remaining unused optical cable holes should be sealed with plugs. Sealing tape is also wrapped around the plug, and the requirements are the same as those in 5. (3) the unused fiber port. This document describes the installation of optical fiber with both single fiber and/or ribbon fiber splices into Optical Splice Enclosure (OSE) metal splice trays (Figure 1).
