

Mobile Broadband Fiber Optic Patch Cord

Article Overview

A fiber optic patch cord is a short, flexible cable with connectors on both ends, used to connect optical devices for high-speed data transmission in mobile broadband and other networks.

Overview

A fiber optic patch cord (also called a fiber jumper or patch cable) is designed for short-distance interconnections within optical networks. It connects devices such as transceivers, switches, patch panels, and servers, enabling reliable signal transmission. Unlike backbone trunk cables, patch cords are flexible, reusable, and typically range from 1 to 15 meters in length, making them ideal for intra-rack, inter-rack, and FTTH/FTTx applications ().

Fiber Types

- Single-Mode Fiber (SM, OS1/OS2): Core $\sim 9\ \mu\text{m}$, yellow jacket, supports long-distance transmission (up to 120 km at 10G), ideal for telecom backbones and campus networks ().
- Multimode Fiber (MM, OM1-OM5): Core 50-62.5 μm , colors vary (OM3/OM4 aqua, OM5 lime green), suitable for short-distance, high-speed links in data centers (up to 400 m at 10G/40G) ().

Connector Types

- LC (Lucent Connector): Small, duplex, high-density, common in modern data cent...
