

Mobile fiber optic cable cutting

Article Overview

Mobile fiber optic cable cutting requires precision tools, proper technique, and safety measures to ensure clean cuts and maintain signal integrity.

Key Considerations for Mobile Cutting

Cutting fiber optic cables in the field involves handling delicate glass or plastic fibers that transmit data as light signals. Any damage can cause signal loss or failure, so precision and care are essential. Fiber optic cables typically consist of the core fiber, protective coating, strengthening fibers, and an outer jacket, each requiring careful handling during cutting .

Tools for Mobile Fiber Cutting

- **Fiber Optic Cleavers:** Devices like the Q1S Auto Fiber Cleaver provide automatic, high-precision cuts with angle accuracy $\leq 0.5^\circ$, suitable for bare fibers (0.25mm), coated fibers (0.9mm), and fiber cables (2.5–3.0mm). They are portable, battery-powered, and often include LED lighting for visibility in low-light conditions .
- **Handheld Strippers and Cutters:** Tools such as the JIC-125 Fiber Optic Stripper or Kevlar cutters allow technicians to remove coatings and cut through tough fibers safely. Ergonomic designs and serrated blades reduce slippage and hand fatigue, making them ideal for repeated field use .
- **Thermal Strippers:** Adjustable thermal strippers can remove baked-on coatings or fluoroacrylate undercoating, supporting a wide range of fiber diameters from 30 μm to 1000 μm , which is useful for diverse field applications .
