

Multi-circuit output of lighting distribution box

Overview

Multiple output terminals that distribute power to devices or circuits. This design eliminates the need for messy parallel wiring and reduces connection errors. Use to control 2 groups of luminaires independently of each other (same circuit, separate control) or to control 2 individual circuits of luminaires (2 protective devices at the distribution board (s) - must be the same phase). Regardless of application, these Distribution Boxes support standard. With over 55,000 flex7 Lighting Distribution Boxes installed every year there's got to be a reason they're such a popular choice. Our Lighting Distribution Boxes are by no means an. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices.
