

North Africa Cable Ladder Type

Article Overview

Cable ladders in North Africa are available in welded, modular, and hot-dip galvanised designs, suitable for industrial and commercial cable management applications.

Types of Cable Ladders

1. **Welded Cable Ladders** Welded ladders, such as the LONGBOW™ LB20B/C system, feature all-welded construction with side rails formed in a “C” profile and perforated cross rungs in a “U” channel profile. They are made from structural grade steel, offering high strength-to-weight ratios and predictable load-bearing capacity. These ladders are ideal for heavy-duty applications and can carry static electrical cable loads with calculated Safe Working Loads (SWL) and controlled deflection ratios, following NEMA VE 2 guidelines . 2. **Hot-Dip Galvanised Mild Steel Ladders** Standard cable ladders, like the CL130 series, are manufactured from mild steel and hot-dip galvanised to meet corrosion resistance standards (SANS 121:2001 / ISO 1461:2009). These ladders are suitable for general industrial and commercial installations, providing durability in indoor and outdoor environments . 3. **Modular and Lightweight Ladders** Some systems, such as Eaton's B-Line series, offer modular metallic and non-metallic/fiberglass ladders. These are designed for flexibility, ease of installation, and reduced structural support requirements, making them cost-effective for large-scale projects. They also integrate with wire baskets, cable trays, and fixing accessories for complex cable routing .

Applications

Cable ladders are used to support, route, and protect electrical, data, fiber optic, an...
