

Norway-Nigeria fiber optic cable

Article Overview

The Norway-Nigeria fiber optic connection is part of broader efforts to enhance Nigeria's digital backbone, including the Via Africa subsea cable linking Nigeria to Europe and the \$2 billion Project BRIDGE national fiber rollout.

Via Africa Subsea Cable

The Via Africa project is a 20,000 km subsea cable initiative led by French telecom giant Orange and its partners, designed to connect Nigeria and other African countries directly to Europe through the Atlantic corridor . This cable aims to reduce internet outages, strengthen digital infrastructure resilience, and attract investments from hyperscalers, cloud firms, and data centers. Nigeria, as West Africa's largest internet hub, is a strategic landing point for the project, which will diversify connectivity routes and reduce dependence on existing, vulnerable cables . The project is particularly important given the frequent disruptions in West Africa caused by cable faults, which have affected banking, fintech, and enterprise operations .

Project BRIDGE: National Fiber Expansion

Complementing international connectivity, Nigeria is implementing Project BRIDGE, a \$2 billion initiative to deploy 90,000 km of fiber optic cables nationwide . This project is structured as a public-private partnership, with funding from sovereign loans, development finance institutions, and private equity. The goal is to create a national backbone for universal ICT access, improve internet speed and reliability, and increase penetration to over 70% of the population . The project also emphasizes local content, with Nigeria's Coleman Technical Industries producing fiber domestic...
