

# Onu Splitter Installation

## Article Overview

ONU splitter installation involves connecting the OLT to multiple ONUs via a passive optical splitter, ensuring proper signal distribution and network performance.

### Overview of Components

- OLT (Optical Line Terminal): Located at the service provider's central office, it manages upstream and downstream traffic, allocates bandwidth, and controls multiple ONUs .
- ONU (Optical Network Unit): Installed at the customer premises, it converts optical signals to electrical signals for devices like routers, VoIP phones, and CATV .
- Optical Splitter: A passive device that divides the optical signal from the OLT to multiple ONUs, supporting ratios from 1:2 up to 1:32 depending on network requirements .

### Installation Steps

- Plan Network Topology: Choose between Point-to-Multipoint (P2MP), where one OLT serves multiple ONUs via a splitter, or Point-to-Point (P2P), which provides a direct connection for each ONU . P2MP is more cost-effective for large deployments.
- Place the Splitter:
  - Splitters can be installed in corridor information boxes, cabinets, or rack-mounted 1U boxes .
  - Ensure the splitter is secured and protected from physical damage.
- Connect OLT to Splitter:
  - Use a GPON SFP module in the OLT and connect it to the splitter input port via sin...
