

Optical Cable Intelligent Monitoring and Management System

Overview

Utilizing a geographic information platform and backed up by powerful resource management functions, it integrates cable monitoring, alarm notifications, fault analysis, localization, fault management, and line maintenance and management to ensure the safe and efficient. Utilizing a geographic information platform and backed up by powerful resource management functions, it integrates cable monitoring, alarm notifications, fault analysis, localization, fault management, and line maintenance and management to ensure the safe and efficient. Fiber monitoring refers to the continuous assessment of fiber quality through software tools and equipment that form an integrated optic fiber monitoring and management system. GLSUN's fiber cable monitoring system combines with OTDR, optical switches and network management software to form speedy. OTS3000-MSTP is a kind of optical communication integrated platform. GLSUN independently research, develop and design it. Its high density and high integration enable the system provide rich functions and flexible configurations.
