

Optical Power Meter Calibration Technical Support

Overview

This guide covers when to calibrate, what calibration actually involves, what a legitimate certificate looks like, and how to verify your meter's accuracy between calibrations. Send the meter to a NIST-traceable calibration lab. This application note demystifies how EXFO's IQS-12002 Optical Calibration System can guide. We can calibrate your Fiber Optic Power Meters at two service price levels: ISO9001 or ISO/IEC 17025. We check the cleanliness of the optical detector. If we find a performance problem with the received instrument, we will let you know. You can also ask for a linearity. Optical power meters are designed to measure optical power in a specified wavelength range as accurately as possible. The lab measures the meter against. Expect world-class support from Ophir, including: Participation in local trade shows and events across the globe. Ophir product announcements and breaking news. Subscribe to review new developments in laser analysis, beam diagnostics, and beam profiling.
