

Outdoor-specific low-voltage distribution box

Article Overview

An outdoor low voltage distribution box (LVDB) is a weatherproof enclosure designed to safely distribute and control low voltage electricity in outdoor environments.

Key Features

Construction and Materials: Outdoor LVDBs are typically made from high-quality stainless steel (SS304 or SS316) or other corrosion-resistant metals, ensuring durability, heat insulation, anti-condensation, and long-term rust protection . Some models feature flame-retardant and environmentally friendly coatings. **Protection and Safety:** Most outdoor LVDBs have an IP54 or higher protection rating, making them waterproof, dustproof, and resistant to foreign objects . Lockable doors and anti-rain covers prevent unauthorized access and enhance safety. **Design and Functionality:** These boxes integrate multiple functions including power distribution, metering, protection, control, and reactive power compensation. Modular designs allow customization for specific requirements, with busbar systems supporting up to 3200A and circuit breakers rated up to 630A . Ventilation holes and cable entry points are designed to prevent water ingress while allowing proper airflow.

Applications

Outdoor LVDBs are suitable for residential, commercial, and public infrastructure projects. Common uses include:...
