

Pakistan High-Speed Optical Connectivity DML

Article Overview

Pakistan is rapidly expanding its high-speed optical connectivity through CPEC fiber projects, private submarine networks, and advanced DML-based transmission systems.

CPEC and National Fiber-Optic Infrastructure

Pakistan's high-speed optical backbone is significantly enhanced by the China-Pakistan Economic Corridor (CPEC) Digital Silk Road, which includes the Pakistan-China Fiber Optic Cable Project spanning over 820 km from Khunjerab Pass to Rawalpindi . This high-capacity link reduces reliance on undersea cables, lowers latency for data transfer to China and Central Asia, improves cybersecurity, and provides redundancy against outages. Phase II of the project will extend connectivity to Gwadar and Karachi, creating a complete north-south digital corridor. Additionally, Tier-3 and Tier-4 data centers in Karachi, Lahore, and Islamabad are being developed to support cloud computing, AI, and secure e-governance services .

Private Sector Contributions

Transworld Associates (TWA), Pakistan's leading Tier-1 private operator, owns and operates submarine fiber-optic cable systems, providing high-capacity international connectivity through services like IPLC and Global MPLS . Their enterprise solutions, including TCloud, offer secure, low-latency, and scalable digital infrastructure for businesses, supporting Pakistan's growing digital economy
