

Palestinian Polyurethane Cable Tray Dimensions and Specifications

Overview

Constructed from single sheet of perforated metal, they are convenient for cables which require both a degree of protection from external damage and some ventilation. Length (L): 2500mm, 3000mm. Bahra Electric Cable Trays are an essential component of any well-designed electrical infrastructure, providing a safe, organized, and easily accessible pathway for routing and managing cables, wires, and other electrical conductors. They provide a structured alternative to conduit systems, allowing easier installation, maintenance, and future expansion. MetalEgyt offers multiple cable tray types to suit different load. In practice, cable tray dimensions are a system of interrelated measurements —width, depth, length, and material thickness—that directly affect cable fill compliance, heat dissipation, structural loading, and long-term expandability. All illustrations, descriptions and technical information included in this document are provided as indications and can cable trays are equivalent.
