

Photovoltaic DC combiner box with 4 inputs and 1 output

Article Overview

A 4-input, 1-output PV combiner box consolidates multiple solar panel strings into a single DC output while providing overcurrent, overvoltage, and lightning protection for safe and efficient solar system operation.

Overview

A 4-input, 1-output photovoltaic DC combiner box is designed to combine the outputs of four separate PV strings into a single DC line that feeds an inverter or charge controller. These combiner boxes are widely used in residential, commercial, and utility-scale solar installations to simplify wiring, improve safety, and protect the system from electrical faults .

Key Features

- Input/Output Configuration: Four parallel PV string inputs and one consolidated DC output .
- Voltage and Current Ratings: Typically rated for DC 1000V and maximum output currents up to 60A, with each string handling around 15A .
- Protection Mechanisms:
 - DC Fuses or MCBs for overcurrent protection on each string .
 - Surge Protection Devices (SPD) to guard against lightning and voltage spikes .
 - Anti-reverse diodes to prevent backflow of current from the inverter to the PV strings
