

Power Distribution Box Supply for Computer Room

Article Overview

Power Distribution Units (PDUs) are essential for safely and efficiently distributing electrical power to all IT equipment in a computer room, offering options from basic distribution to intelligent monitoring and remote control.

Overview of PDUs

A Power Distribution Unit (PDU) is a specialized device designed to distribute power from a single input source to multiple output receptacles, specifically for server racks, network cabinets, and data centers . Unlike standard power strips, PDUs are built to handle high-density, critical IT loads, providing robust construction, precise power management, and often advanced monitoring capabilities . PDUs can be rack-mounted or floor-mounted, depending on the room layout and equipment density .

Types of PDUs

- Basic PDUs: Provide reliable power distribution without monitoring capabilities. Ideal for cost-effective setups where simple power delivery is sufficient .
- Metered PDUs: Include input or outlet-level metering to monitor power consumption, helping with load balancing and capacity planning .
- Switched/Managed PDUs: Offer remote on/off control for individual outlets, group reboot, and advanced monitoring, enabling proactive management and remote troubleshooting .
- Intelligent PDUs: Combine monitoring, environmental sensors, and sequential switching for precise control and energy efficiency
