

Price list for fiber optic cable splicing in photovoltaic power plants

Article Overview

Fusion splicing for fiber optic cables in photovoltaic power plants typically costs between \$50 and \$150 per splice, depending on project size, fiber type, and site conditions.

Cost Breakdown

Per-Splice Pricing: For commercial projects, fusion splicing generally ranges from \$50 to \$150 per splice point. This includes labor and OTDR verification of each joint but usually excludes materials like closures, trays, or project management fees. Large projects with high fiber counts can reduce the per-splice cost due to volume pricing.

Labor and Equipment: Fusion splicing requires skilled technicians and specialized equipment such as fusion splicers (\$3,000–\$15,000), precision cleavers (\$500–\$2,000), and OTDR testing devices. Mechanical splicing is cheaper upfront but less reliable, making fusion splicing the preferred choice for long-term photovoltaic plant installations.

Site Conditions: Costs vary based on installation environment. Aerial splicing in open areas is cheaper than underground vault work, which may require traffic control, confined space entry, or additional crew members.

Photovoltaic plants often involve outdoor, sometimes remote, installations, which can increase mobilization and labor costs.

Enclosure and Documentation: Some contractors, like Adtell Integration, offer fixed unit pricing per enclosure, around \$275 per enclosure, including labor, testing, and documentation, with a two-year warranty on services. Hardware costs are additional.

Project Size and Fiber Count: A 12-fiber cable has 12 splice points per closure, while a 144-fiber cable has 144. Larger fiber...
