

Price of Distributed Photovoltaic Combiner Boxes

Article Overview

Distributed PV combiner boxes typically cost between \$800 and \$2,500 per unit, with additional installation costs ranging from \$200 to \$500 depending on system complexity.

Price Range and Factors

The cost of a PV combiner box varies widely based on capacity, features, and quality. Basic models for small-scale systems may be at the lower end of the \$800–\$1,200 range, while advanced units with string monitoring, surge protection, and remote diagnostics can reach \$2,500 or more per unit . Installation is usually not included in the base price and can add \$200–\$500 depending on the complexity of wiring and system size . Key factors influencing cost include:

- Number of input circuits: More strings require larger or more complex boxes .
- Protection features: Overcurrent protection, surge protection, and DC disconnect switches enhance safety but increase cost .
- Monitoring capabilities: Boxes with voltage, current, temperature, and SPD health monitoring provide better performance tracking and ROI but are more expensive .
- Enclosure rating: IP65-rated weatherproof boxes cost about 10% more than IP54 models but offer longer lifespan in harsh environments .
- Customization and accessories: Tailor-made solutions or additional components for utility-scale systems can increase upfront costs
