

Price of Photovoltaic Power Generation Cable Trays

Article Overview

Cable trays for photovoltaic systems typically range from \$2 to \$25 per meter, depending on material, type, size, and surface finish.

Price Range and Cost Factors

The average price per meter of cable trays varies widely due to several factors: material, tray type, size, coating, and supplier margins. For PV installations:

- Galvanized steel: Most common, balances durability and cost.
 - Stainless steel: Higher corrosion resistance, more expensive.
 - Aluminum: Lightweight and rust-proof, pricier than steel.
 - Plastic/PVC: Budget-friendly, suitable for light loads but not heavy-duty applications.
- Tray design also affects cost: ladder trays are more expensive but support heavy cables, while wire mesh or perforated trays are cheaper and ideal for lightweight wiring. Coatings like hot-dip galvanization (HDG) or powder coating increase durability and price, especially for outdoor PV installations.

Installation and Bulk Considerations

- Bulk orders can reduce per-meter costs significantly.
- Labor, shipping, and equipment depreciation add to total project costs.
- Custom sizes and accessories (connectors, covers, supports) may increase the price but improve installation efficiency and cable protection
