

Price of network cabinets inside low-voltage electrical shafts

Article Overview

Network cabinets for low-voltage electrical shafts typically range from \$200 to \$1,500 or more, depending on size, protection rating, and features.

Overview

Network cabinets installed inside low-voltage (LV) electrical shafts are designed to house networking equipment, patch panels, switches, and cabling while providing protection against dust, moisture, and unauthorized access. These cabinets are often wall-mounted or modular, with perforated or solid doors, and may include cable management accessories, airflow solutions, and lockable panels.

Price Factors

- **Size and Capacity:** Small wall-mounted cabinets (e.g., 6–12U) are generally less expensive, while larger floor-standing or modular cabinets (e.g., 24–42U) cost more.
- **Protection Rating:** Cabinets with higher IP ratings (IP54–IP65) for dust and water resistance are more costly.
- **Material and Build:** Steel or reinforced fiberglass cabinets designed for durability and anti-vandalism protection increase the price.
- **Accessories:** Integrated cable management, shelves, fans, and surge protection add to the overall cost.
- **Modularity and Customization:** Modular enclosures that can be configured for specific LV network architectures or underground networks may be priced higher due to flexibility and specialized design
