

Price of rooftop solar cable trays

Article Overview

The cost of installing rooftop solar cable trays typically ranges from \$5 to \$20 per linear foot, depending on material, type, and labor complexity.

Factors Affecting Price

-

Material Choice: Aluminum trays are lightweight, corrosion-resistant, and easier to handle, making them slightly more expensive but ideal for long-term durability (20–25 years) on rooftops . Hot-Dip Galvanized (HDG) steel is cheaper but heavier and may corrode faster in coastal areas . Stainless steel 304 offers high durability but comes at a premium . Plastic interlocking trays, like the GSE Landscape Tray, are lightweight and quick to install but may be limited to certain panel sizes .

-

Tray Type: Ladder trays, wire mesh trays, and hand-bendable Snake Trays differ in cost and installation effort. Ladder trays are robust but heavier, wire mesh trays are flexible and cost-effective, and Snake Trays reduce labor costs due to easy bending and nesting for transport .

-

Labor and Installation Complexity: Installation costs vary based on rooftop size, slope, and cable routing complexity. Proper cable management, including spacing for DC polarities and rooftop ballast distribution, is crucial to prevent overheating and fire hazards . Labor costs can increase if the roof is difficult to access or requires custom tray bending.....
