

Price of secondary equipment distribution box

Article Overview

Secondary distribution boxes typically range from \$100 to \$1,000 or more, depending on capacity, features, and customization.

Overview

Secondary distribution boxes, also known as sub-distribution boxes, are used to manage power supply for specific areas or equipment within a larger electrical system. They are part of a three-level distribution system, where the primary distribution box feeds multiple secondary boxes, which in turn may supply individual equipment or circuits. These boxes house circuit breakers, fuses, switches, and protective devices to ensure safe electricity flow.

Price Factors

The cost of secondary distribution boxes varies widely based on several factors:

- **Capacity and Voltage Rating:** Higher amperage or three-phase systems cost more than standard single-phase residential units.
- **Material and Construction:** Weather-resistant or corrosion-proof enclosures for outdoor use carry a premium over indoor-rated units.
- **Features:** Smart monitoring, remote control, digital displays, and surge protection increase the price.
- **Customization:** OEM branding, modular designs, and specific mounting configurations...
