

Price of semi-circular arch bridge bridge frame

Article Overview

The cost of a semi-circular arch bridge frame typically ranges from \$400,000 to over \$2,000,000 depending on span, materials, and construction method.

Cost Overview

The price of a semi-circular arch bridge frame depends on several key factors:

- **Bridge Span and Type:** Small pedestrian or farm bridges may start around \$50,000, while mid-sized vehicular crossings commonly range from \$400,000 to \$2,000,000. Large highway or multi-span arch bridges can exceed \$4,000,000 .
- **Material:** Steel or reinforced concrete are common. Precast concrete segments, like those in the ArchLok system, allow for faster installation and predictable costs . Steel modular bridges can also be prefabricated and installed efficiently, with prices varying by span and width .
- **Construction Method:** Precast or modular systems reduce on-site labor and weather dependency, which can lower costs and shorten construction time . Traditional cast-in-place arches may require more labor and scaffolding, increasing expenses.
- **Site Conditions:** Foundation type, access constraints, and urban vs. rural location affect costs. Pile foundations or difficult terrain can add significantly to the budget .

Prefabricated Options

- **ArchLok Precast Concrete System:** Uses curved reinforced concrete segments cas...
