

Price of vertical bend fabrication for mesh cable trays

Article Overview

The price of a vertical bend in a mesh cable tray typically ranges from \$20 to \$150 per piece, depending on material, angle, and supplier.

Overview

Vertical bends in mesh cable trays are used to change the direction of cable runs vertically, often at 45° or 90° angles, while maintaining proper cable support and ventilation . They are commonly made from galvanized steel, stainless steel, or aluminum, with wire mesh designs providing lightweight construction and excellent heat dissipation . These bends are essential in industrial, commercial, and data center installations to ensure organized and safe cable routing.

Factors Affecting Price

- **Material:** Stainless steel bends are generally more expensive than galvanized steel or aluminum due to corrosion resistance and durability .
- **Angle and Type:** Standard 45° or 90° inside bends are more common and cost less, while custom angles or diversity bends for complex routing can increase the price .
- **Size and Load Capacity:** Larger bends designed for heavy cable loads or wider trays cost more.
- **Supplier and Quantity:** Bulk orders or direct manufacturer purchases (e.g., Alibaba) may reduce per-unit cost, while retail suppliers like Rexel USA or Platt Electric Supply may have higher prices and require account registration to view exact pricing
