

Price of wiring to the electrical distribution box in the building corridor

Article Overview

The cost of wiring to a distribution box in a building corridor typically ranges from \$4 to \$7 per square foot for rough-in wiring, with additional costs for the distribution panel and labor depending on complexity and materials.

Key Cost Components

1. Wiring Type and Installation Method

- Concealed wiring (inside walls or ceilings) is the most common in modern buildings and provides a clean finish, but it is more labor-intensive and slightly more expensive.
- Surface wiring (mounted on walls or in conduits) is more visible but can reduce labor costs.
- Wire material and gauge affect cost: copper is more expensive than aluminum, and thicker wires for higher loads increase material costs .

2. Distribution Panel and Circuit Considerations

- The size and quality of the distribution panel, number of circuits, and amperage rating influence the total cost. Larger panels or higher-capacity breakers increase expenses.
- Adding circuits for corridor lighting, outlets, or emergency systems requires more wiring and labor
