

Procurement of 12-core optical cables

Article Overview

Selecting 12-core optical cables requires careful consideration of fiber type, cable structure, installation environment, and supplier capabilities to ensure reliable performance.

Key Selection Criteria

When procuring 12-core optical cables, consider the following factors:

- **Fiber Mode and Type:** Single-mode (OS2, G.652.D) is common for long-distance telecom and FTTH applications, while multi-mode may be used for shorter internal networks .
- **Cable Structure:** Options include tight-buffered cables for indoor use, loose-tube or armored cables for outdoor and OSP applications . Armored cables provide mechanical protection and water resistance.
- **Installation Environment:** Determine whether the cable will be installed indoors, outdoors, in ducts, or aerially. Environmental factors like UV exposure, moisture, and rodent risk influence jacket material and reinforcement choices .
- **Jacket Material:** Common options include LSZH (Low Smoke Zero Halogen) for indoor safety, PE (Polyethylene) for outdoor durability, and armored steel tape for high-risk areas .
- **Performance Specifications:** Check attenuation, bending radius, temperature range, and compliance with standards (e.g., CE, G.652.D, Euroclass Cca-s1a-d0-a1) to ensure compatibility with your network .
- **Reel Length and Quantity:** Confirm the required length per reel and total quantity to match project needs and minimize splicing or wastage
