

Production equipment for arc bends in cable trays

Overview

Parts with flanges, U-shapes, brackets or support bends need a press brake machine. Flat blanks can be prepared by a fiber laser cutting machine for flexible shapes or a hydraulic shearing machine for straight rectangular blanks. The line integrates decoiling, servo leveling & feeding, 180T punching, cutting and 28-pass roll forming into one continuous process. The best machine solution for cable tray accessories is usually a combination of CNC punching, press brake bending, cutting, and custom tooling. Use a CNC punching machine for mounting holes, slots, louvers and repeated patterns; use a press brake for flanges, brackets, elbows, tees and reducers;. High-precision cable tray bending machine designed for fast, accurate, and efficient bending of various cable trays. WhatsApp☎17802216114Email✉bernice@hx-machinery. Our cable trays are produced in fit for purpose materials like stainless steel, galvanized, aluminium and fibreglass (FRP/GRP) composites to suit any project type both offshore and onshore.
