

Relay Protection and Feeder Automation

Overview

Distribution automation depends on precise coordination between devices such as remote terminal units (RTUs), fault passage indicators (FPIs), and feeder relays. Reliable feeder protection relays enable: · Automated Fault Location and Isolation – Reducing outage times from. REF615 is a dedicated feeder protection and control relay for protection, control, measurement and supervision of overhead lines and cable feeders in utility and industrial power distribution systems, including radial, looped and meshed distribution networks, with or without distributed power. Feeder protection, or more exactly protection for overhead lines and cables, is the most commonly used type of protection. The protection has to ensure that the power grid continues to supply energy. This includes grounded, non-grounded, resistance-grounded or compensated grounded networks with or without. Feeder protection plays a key role, enabling operators to prevent damage to equipment, minimize power outages, and ensure a reliable supply of electricity in medium-voltage distribution utility and industrial networks. Utility operators face a challenging and dynamic environment due to the. GE Vernova's distribution feeder protection systems provide advanced protection with flexibility, programmability and communications for maximum system reliability.
