

Relay protection trip alarm

Overview

Relays A and C are time-delayed by copper slugs to prevent spurious alarms during tripping or closing operations. The resistors are mounted separately from the relays and their values are chosen such that if any one component is inadvertently short-circuited, a. A Trip Circuit Supervision Relay (TCSR) is a protective device designed to continuously monitor the health and integrity of circuit breaker trip circuits.

Components: Essential parts of a supervision circuit include NO and NC contacts, relays, lamps, and. ABB's system offering ranges from Electrical Balance of Plant (EBOP) for power plants, bulk power transmission, turnkey substations and complete electrification to utility automation and power distribution. If the relay shows a faulty trip circuit, then the user can switch off the breaker at normal load and attend the problem.
